Cost behavior

* Variable Cost

volume	cost	average
0	0	0
1	200	200
3	600	200
10	2000	200
1000	20000	200

* Fixed cost

volume	cost	average
-	10000	0
1	10000	10000
10	10000	1000
100	10000	100
1000	10000	10
	20000	

* $y = A$

* $y = 200x$

* mixed cost

volume	cost	average
1000	10000	10
2000	15000	7.5
3000	20000	6.8
4000	25000	6.2

* $y = A + Bx$

$$B = \frac{\Delta \text{cost}}{\Delta \text{Vol}} = \frac{4000 - 1000}{25000 - 10000} = 5 \text{ \$/unit}$$
